DETAILED ACTION

Drawings

1. The replacement drawings were received on 18 February 2005. These drawings are accepted. Previous objections to the drawings are hereby withdrawn by the Examiner.

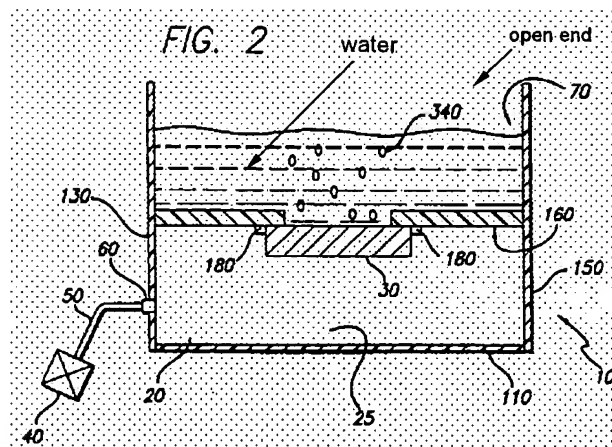

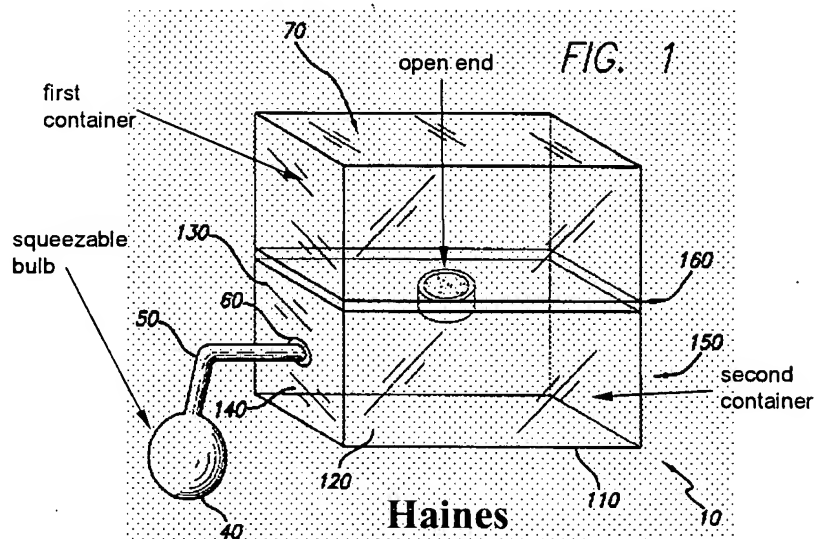

Allowable Subject Matter

2. Claims 1, 3, 4, 6-9 and 17 are allowed over the Prior Art of record.

3. The following is an examiner's statement of reasons for allowance: As to claim 1, the primary reasons for allowance of the claim is the inclusion of the limitations of a water resistant and ventilatory examining device for cloth including a first container having two opposite open ends, a second container having a closed and open end; a combining means to combine the first and second containers, wherein the combining means is a ring-like member upper and bottom rings with peripheries to engage the first and second containers in a watertight manner, an air supply device attached to the second container and whereby a cloth is sandwiched between the combining means and the first container which is filled with water, supplying the second container with air (i.e. air pressure is increased) to see if water permeates the cloth air passes through the cloth thus assessing the cloth's test capabilities. As to claim 9, the primary reasons for allowance of the claim is the inclusion of the limitation of a water resistant ventilatory examining device for cloth having first and second containers as recited in claim 1, wherein cloth is sandwiched between a combining means of the first and second containers, supplying water and air similarly as in claim 1 to assess the test capabilities of the cloth, wherein the combining means has a top ring formed on periphery of the first container having a plurality of through

holes and a bottom ring formed on the periphery of the second container, also having a plurality of through holes, wherein in threaded bolts and nuts are received in the through holes and the nuts tightened to secure engagement between the first and second containers.

The closest reasonable Prior Art reference is US 6,196,055 to Haines which discloses a water resistant and ventilatory examining device for cloth (see Figs. 1 and 2 below) having a first container and second containers and a pressurizing means to test the permeability of cloth materials.
